Mus musculus adult male adrenal gland cDNA, RIKEN full-length enriched
library, clone:7930442016 product:sema domain, seven thrombospondin
repeats (type 1 and type 1-like), transmembrane domain (TM) and short
cytoplasmic domain, (semaphorin) 5B, full insert sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the RIKEN Genome Exploration Research Group Phase I & II Team; "Analysis of the mouse transcriptome based on functional annotation of 60,770 full-length cDNAs."; Nature 420:563-573(2002).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A, Accession: A4227.

A, Accession: A4227.

A, Molecule type: protein

A, Readdues: 997-1003 <SUN>
A, Note: Cys-992 is shown to have a free sulfhydryl

C, Genetics: A, Gene: GDB:120438; OMIM:188060

A, Introns: 23/1

A, Introns: 23/1

A, Note: the list of introns may be incomplete
C; Complex: homotrimer, disulfide linked
C; Function:
A, Description: participates in cell migration and adhesion, and in platelet aggregation
A, Description: participates in cell migration and adhesion, and in platelet aggregation
C; Superfamily: thrombospondin 1; EGF homology; thrombospondin type 1 repeat homology; vC
C; Keywords: beta-hydroxyasparagine; calcinum binding; cell adhesion; glycoprotein; trimer
C; Keywords: beta-hydroxyasparagine; calcinum binding; cell adhesion; glycoprotein; trimer
C; Keywords: beta-hydroxyasparagine; calcinum binding; cell adhesion; glycoprotein; trimer
F; 19-1170/Product: thrombospondin 1 #status predicted <MAT>
F; 19-1170/Product: thrombospondin type 1 repeat homology <THR2>
F; 375-1586/Domain: thrombospondin type 1 repeat homology <THR2>
F; 434-490/Domain: EGF homology <EGF2>

New peptide fragments and analogues of thrombospondin - useful for inhibiting tumour metastasis, as clotting agents and to promote or inhibit cell adhesion and immune modulation.

Claim 3; Page 26; 30pp; English

The peptide is a synthetic fragment of human thrombospondin and is based on the sequence motif of Robson et al (Nature (1988) 335.79-82). It has thrombospondin-like activity and can be used: (1) to inhibit tumour cell metastasis and atherosclerosis; (2) to promote or nhibit platelet aggregation, angiogenic activity, thrombotic or thrombolytic activity, immune modulaton and cell adhesion; (3) to promote wound healing; and (4) as an antiviral aggent (interferes with cell adhesion). The peptide is prepd. by std. synthesis techniques. See also AAR13626-R13641. (Updated on 25-MAR-2003 to correct PA field.)

The invention provides a method for (a) mimiching a biological activity of thrombospondin; (b) promoting thrombotic activity; or (c) inhibiting a biological activity of thrombotic activity. The method comprises thrombospondin other than thrombotic activity. The method comprises chrombospondin include cell adhesion-promoting activity, cell diniculae cell adhesion-promoting activity, cell chemotactic activities, haemostatic activity, or parasite metastasis activity, platelet aggregating activity, or parasite metastasis activity, platelet aggregating activity, including activity, chibrinolytic activity and immune modulation. The peptides are capable of inbrinolytic activity and immune modulation. The peptides are capable of atherosclerosis, malaria, thrombotic and thrombolytic conditions and adjourner is a sell attachment promoters, complement modulators and

The invention relates to a polypeptide having the retroinverso form of a polypeptide that minics or inhibits the biological activity of thrombospondin (Thrombin sensitive peptide (TSP), or a retroinverso thrombospondin (Thrombin sensitive peptide (TSP), or a retroinverso polypeptide in which cysteine residues are modified with a sulphydryl blocking group. The polypeptide is useful for inhibiting the invasive and metastasis, invasion, adhesion and for inhibiting the invasive and metastatic activity of melanoma cells. The polypeptides are also useful for promoting and inhibiting cellular attachment to tissue culture flasks for anti-platelet aggregation and antimalarial activity, as diagnostic for anti-platelet aggregation and antimalarial activity, as diagnostic consequents in different therapeutic applications, in cancer therapy, for reagents in different therapeutic opplications, in cancer therapy, for transports and thrombotycopenia continuous antherapeutic applications, atherosclerosis, angiogenesis, complement modulators, and antimetastatic agents, in biomedical devices, complement modulators, and antimetastatic agents, in biomedical devices, complement modulators, and antimetastatic agents, in biomedical devices, complement modulators, and antimetastatic agents in biomedical devices, complement modulators, and antimetastatic purposes, and content of the corresponding requence is TSP peptide. Note: This sequence is solate thrombospondin cells for diagnostic or therapeutic purposes, and content sequence coll membranes. The present sequence is TSP peptide. Note: This sequence content the corresponding sequence found in column 11-12 does not conserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polypeptide having retroinverso form of polypeptide that mimics/inhibits biological activity of thrombospondin, for treating cancer, malaria, wound healing, atherosclerosis, angiogenesis, thrombotic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a polypeptide which has the retroinverso form of a polypeptide which mimics or inhibits the biological activity of thrombospondin. Also described is a method for inhibiting cell metastasis, invasion or adhesion, comprising administering to a host the retroinverso polypeptide compound. The retroinverso polypeptide is useful for inhibiting tumour cell metastasis, invasion or adhesion, for promoting wound healing or implant acceptance, or for treating malaria, atherosclerosis or thrombosis. The present sequence represents a thrombospondin analogue of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New retroinverso polypeptide, useful for inhibiting tumor cell metastasis, invasion or adhesion, for promoting wound healing or implant acceptance, or for treating malaria, atherosclerosis or thrombosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  thrombospondin; tumour cell metastasis; cell invasion; cell adhesion; wound healing; implant acceptance; malaria; atherosclerosis; thrombosis.

metalloprotease thrombospondin (METH) proteins METH1 and METH2
metalloprotease thrombospondin (METH) proteins METH1 and METH2
cespecitively. METH1 and METH2 have been found to be potent inhibitors of angiogenesis both in vitro and in vivo. They can be used for treating cancer and other disorders related to angiogenesis including abnormal wound healing, inflammation, rheumatoid arthritis, psoriasis, endometrial bleeding disorders, diabetic retinopathy, some forms of macula degeneration, haemangiomas, and arterial-venous malformations. They may be useful in treating deficiencies or disorders of the immune system, by cativating or inhibiting the proliferation, differentiation, or mobilisation (chemotaxis) of immune cells. The etiology of these immune deficiencies or disorders may be genetic, somatic, such as cancer or some deficiencies or disorders may be genetic, somatic, such as cancer or some cutoimmune disorders, acquired (e.g. by chemotherapy or toxins), or infectious. They can also be used to treat inflammatory conditions, both chronic and acute conditions. The products can also be used for detection and diagnosis. ```
The present invention relates to human METH1 and METH2, (WE for metalloprotease and TH for thrombospondin; see AAB50002 and AAB50003).

The present sequence is a TSP domain which are found in METH protein. The present sequence is a TSP domain which are found in METH protein. The used for inhibiting angiogenesis in an individual, and for treating cancer, benign tumours, an ocular angiogenic disease, rheumatoid arthritis, psoriasis, delayed wound healing, endometriosis, arthritis, psoriasis, hypertrophic scars, nonunion fractures, vasculogenesis, granulations, hypertrophic scars, nonunion fractures, coronary collaterals, crebral collaterals, arteriovenous malformations, coronary collaterals, crebral collaterals, arteriovenous malformations, coronary collaterals, crebral collaterals, arteriovenous malformations, is necvascularisation, telangicetasia, haemophiliac joints, angiofibroma, fibromuscular dysplasia, wound granulation, Crohn's disease or therosclerosis. METH can also be used in birth control. METH can also be used in diagnostic methods for the prognosis of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   METH1 and METH2 polynucleotides and encoded polypeptides, used to inhibit angiogensis in the treatment of disorders such as cancer, rheumatoid
cancer therapy, benign tumour; ocular angiogenic disease; rheumatoid arthritis; psoriasis; wound healing; endometriosis; vasculogenesis; granulation; hypertrophic scar; nonunion fracture; sclenderma; trachoma; vascular adhesion; myocardial angiogenesis; coronary collateral; cerebral collateral; arteriovenous malformation; ischaemic limb angiogenesis; osler webber syndrome; TSP domain; plaque neovascularisation; telangiectasia; heemophiliac joint; angiofibroma; fibromuscular dysplasia; wound granulation; Crohn's disease; atherosclerosis; birth control.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Trulli SH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ruben SM, Jonak ZL,

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the nucleotides of polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby compounds of the invention have homology to known proteins, thereby potential therapeutic applications. The polypeptides of the invention may potential therapeutic applications. The polypeptides of the invention may insight into their probable biological activities, and hence contavities are acidities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity; is sequentially activity; activity activity; activity activity, activity, activity, activity, activity, activity, activity, activity, activity, activities, nemocatic or chemokinetic activities, haemostatic, thromboic or may be considered in oncogenesis, cancer cell proliferation or metastasis.

The invention are useful for preventing, treating or ameliorating medical cancers, haematopoletic disorders (e.g., myeloid or lymphoid call cancers, haematopoletic disorders (e.g., myeloid or lymphoid call cancers, haematopoletic or chemokars), conditions, e.g., by protein or gene therapy. Such conditions and annormal arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis

proteins are used for the treatment of conditions associated with

```
healing (e.g., of burns, incisions and ulcers), while those with mimunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders. Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepthelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human
repair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, incisions and ulcare)

Non-naturally occurring Type I repeat peptide (TRP) derived from human thrombospondin-1, KIAA0688 or KIAA0550 proteins, useful in the treatment of anglogenesis and/or cancer.

Claim 4; Fig 2; 84pp; English

The present sequence represents the amino acid of human thrombospondin-1 (hTSP-1) Type I repeat peptide (TRP). The specification describes a non-naturally occurring TRP, derived from hTSP-1, KIAA0688 or KIAA0550 proteins. The TRP protein is an angiogenesis inhibitory protein. TRP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of the domain of type I repeats of human thrombospondin-1 (TSP) ADL70639, consisting of 3 type I repeats. It includes the C-terminal portion of the collagen V binding region; the remainder of this region lies in the procollagen Nonology domain ADL70643. The invention relates to TSP fragments (80-100, 40-55 or 20-35 kDa mol.wt.) found in plasma, and their use in clinical assays for cancer and for generation of antibodies and other binding agents. A method that distinguishes TSP fragment or portion involves: (1) using an epitope shared by TSP and the TSP fragment or portion as a target for a binding molecule, e.g. an antibody, to obtain a quantitation of TSP plus TSP fragment or portion; (2) using an epitope present in TSP but not the fragment or portion to obtain a quantitation of TSP pun of the fragment or portion to obtain a quantitation of TSP pun of the
               angiogenesis and cancer. Angiogenic mediated diseases include tumours, rheumatoid arthritis, psoriasis, ocular angiogenic diseases, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubbosis), Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, coronary collaterals, cerebral collaterals, arteriovenous malformations, ischemic limb angiogenesis, neovascular glaucoma, retrolental fibroplasia, heliobacter related diseases, fractures, vasculogenesis, hematopoiesis, ownlation, menstruation and placentation. TRPs are also useful in the treatment of disease of excessive or abnormal stimulation of endothelial cells. TRP can also be used as a birth control agent, as it prevents the vascularisation required for embryo implantation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New purified thrombospondin fragment extracted from a body fluid, useful for diagnosing cancer e.g. adenoma, adenocarcinoma, carcinoma, lymphoma or leukemia or as calibrators, indicators, immunogens and analytes.
                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention describes a composition comprising cDNA encoding fragments of human thrombospondin-1 (TSP -1), a type 1 repeat polypeptide and cof human thrombospondin-1 (TSP -1), a type 1 repeat polypeptide and cof human thrombospondin-1 (TSP -1), a type 1 repeat polypeptide and cofferent polypeptide and content of tumour (inhibiting necvascularisation in the tumour); for decreasing proliferation of tumour cells; in the tumour, in the property of diseases and conditions associated with angiogenic activity treatment of diseases and conditions associated with angiogenic activity creatment of diseases and conditions associated with angiogenic activity creatment of diseases and conditions and pyogenic granulomas), acoustic neuromas, neurofibromas, trachomas, and pyogenic granulomas), acoustic neuromas, neurofibromas, trachomas, and pyogenic granulomas), created arthritis, psoriasis, ocular angiogenic diseases (e.g. rheumatoid arthritis, psoriasis, ocular angiogenic diseases (e.g. rheumatoid arthritis, psoriasis, ocular angiogenic diseases (e.g. corneal graft rejection, neovascular glaucoma, retrolental fibroplasias, corneal graft rejection, neovascular glaucoma, retrolental fibroplasias, corneal graft rejection, neovascular glaucoma, retrolental fibroplasias, corneal graft rejection, neovascular saction, haemophiliac joints, telangiectasia, plaque neovascularisation; the composition in the tumour cells. This amino acid sequence inhibits neovascularisation in the tumour cells. This sagions of TSP-1, (TSP-1) and containing the 3 type 1 repeat (TSR) regions of TSP-1, appear in the specification but has been created using the human thrombospondin-1 (TSP-1) wild type sequence (see AAU74771) from thrombospondin-1 (TSP-1) wild type sequence (see AAU74771) from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TSP1; thrombospondin; anti-anglogenic; cationic vehicle; gene therapy; liposome; DNA complex; tumour suppressor protein; treatment; neoplastic;

This sequence represents an anti-angiogenic fragment of the thrombospondin I protein. The invention provides a carrier:DNA complex that comprises DNA (see ANXS8725-42) coding for an anti-angiogenic protein or peptide, the complex being deliverable to the site of a tumour in vivo, and which additionally comprises regulatory elements for expressing the anti-angiogenic DNA in a tumour or tumour vasculature. The complex may also include DNA encoding a tumour suppressor protein, especially p53. The carrier is a liposome, cationic polymer, micelle, microsphere, virus, viral component, or a combination of these, and administration is by intravenous or intratumoral injection. The complexes are useful in gene therapy for inhibition of tumour growth. The types of tumors which may be treated include solid tumors such as melanomas and tumors in the lung, colon, brain and breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hTSP-1; platelet glycoprotein; angiogenesis; neovascularisation; inhibitor; solid tumour; skin cancer; angiogenic dysfunction; melanoma; diabetic retinopathy; psoriasis; neovascular glaucoma; Kaposi's sarcoma; inflammation; retrolental fibroplasia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents the thrombospondin gene TSP1 which is used in a method to produce a cationic vehicle consisting of a cationic liposome:DNA complex where the DNA encodes an anti-angiogenic peptide or tumour suppressor protein. Such complexes are used for treatment of neoplastic and metabolic diseases especially for gene therapy of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Anti-angiogenic; carrier:DNA complex; tumour; gene therapy; human; thrombospondin I; melanoma; lung cancer; colon cancer; brain cancer;

This invention relates to novel genes and the encoded proteins thereof that are derived from the sea squirt Ciona intestinalis. Specifically, it refers to those genes that are expressed in the tissues or organs of the sea squirt during its developmental phase. The present invention of development and hence for developing regeneration of the mechanism of development and hence for developing regeneration of the mechanism of development and hence for developing regeneration of the mechanism of development and hence for developing regeneration of the research of various genetic diseases, as well as the analysis of cell the research of various genetic diseases, as well as the analysis of cell compositions can be useful for environmental measurements and water surveys, particularly for sea water surveys, and also for the preparation contrastormed sea squirt for improving edibility of sea squirt such as the contrastormed sea squirt protein sequence that has tissue specific expression during development, given in exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; NOVX; secreted protein; cancer; diabetes; obesity; endocrine disorder; gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                      Certain fragments of thrombospondin, a glycoprotein found in the alpha granules of platelets, can inhibit vascularisation. Peptides derived from the hTSP sequence are useful for inhibiting necosacularisation, esp. in solid tumnours such as melanomas. The inhibitory peptides can also be used in other diseases involving analogenic dysfunction. See AAR40824-R40830. (Updated on 25-WAR-2003 to correct PN field.)

WPI; 2004-082483/08 N-PSDB; ADJ34130 New isolated NOVX polypeptides useful for treating, preventing and diagnosing pathological conditions with NOVX-associated disorders, such as cancer, obesity, diabetes and inflammatory or CNS diseases.

Claim 1; SEQ ID NO 20; 418pp; English

The invention relates to a new isolated polypeptide (designated NOVX) comprising one of 141 fully defined sequences, their mature forms, a protein comprising one or more conservative substitutions or having at least 954 identity to one of the 141 proteins. Also included are a composition comprising NOVX (or a NOVX nucleic acid molecule (NA)), a kit comprising the composition of NOVX nucleic acid molecule encoding a NOVX protein, producing NOVX (comprising nucleic acid molecule encoding a NOVX protein, producing NOVX (comprising outleic acid molecule encoding a NOVX protein, producing NOVX (comprising nucleic acid molecule encoding a NOVX identifying a potential comprises a vector comprising NOVX NA), identifying an agent that binds to NOVX, identifying a potential comprise or physpeptide, where the call comprises a vector comprising that is related for a modulator of activity of or latency or predisposition to a pathology associated with NOVX, treating a pathology associated with NOVX nucleic acid molecule, a cell comprising the vector, an antibody that immunospecifically binds to composition in a sample, and determining the presence of or predisposition or to a disease associated with altered levels of expression of NOVX or the molecule in a sample, and determining the presence of or predisposition or to a disease associated with altered levels of expression of activity of treatment of disorders associated with aberrant expression or activity of the NOVX polypoptole, such as cancer, diabetes, obestty, and endocrine, concerning assays, chromosome mapping, tissue typing, gene contents and predictive medicine. The present sequence represents a NOVX polypoptole. protein

a collaboration the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch). This SWISS-PROT entry is copyright. It is produced through a collaboratic between the Swiss Institute of Bioinformatics and the EMBL outstation Lamalle D., Dastugue B., Meiniel A.; "SCO-spondin family secreted by the subcommissural organ is a candidate in the modulation of neuronal Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Cetartiodactyla; Ruminantia; Pecora; Bovidae; Bovinae; Bos. -i- SIMILARITY: Belongs to the thrombospondin family.
-i- SIMILARITY: Contains at least 2 EGF-like domains.
-i- SIMILARITY: Contains at least 1 F5/8 type C domain.
-i- SIMILARITY: Contains at least 3 LDL-receptor class A domains.
-i- SIMILARITY: Contains at least 4 TSP type-1 domains.
-i- SIMILARITY: Contains 1 VWFC domain. SEQUENCE FROM N.A.
